NumPy Exercises

Now that we've learned about NumPy let's test your knowledge. We'll start off with a few simple tasks, and then you'll be asked some more complicated questions.

```
Import NumPy as np
```

7.2111025509279782

In $[]: col_sum = np.sum(mat, axis = 0)$

Out[]: array([55, 60, 65, 70, 75])

Get the sum of all the columns in mat

Out[]:

```
import numpy as np
        Create an array of 10 zeros
In []: a = np.zeros(10)
        array([ 0., 0., 0., 0., 0., 0., 0., 0., 0.])
Out[]:
        Create an array of 10 ones
In [ ]: b = np.ones(10)
        array([ 1., 1., 1., 1., 1., 1., 1., 1., 1.])
        Create an array of 10 fives
In [ ]: c = np.ones(10) * 5
        С
        array([ 5., 5., 5., 5., 5., 5., 5., 5., 5.])
        Create an array of the integers from 10 to 50
In [ ]: array = np.arange(10, 51)
        array([10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26,
               27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43,
               44, 45, 46, 47, 48, 49, 50])
        Create an array of all the even integers from 10 to 50
In [ ]: array = np.arange(10, 51, 2)
        array
        array([10, 12, 14, 16, 18, 20, 22, 24, 26, 28, 30, 32, 34, 36, 38, 40, 42,
               44, 46, 48, 50])
        Create a 3x3 matrix with values ranging from 0 to 8
In []: x = np.arange(0,9).reshape(3,3)
        array([[0, 1, 2],
Out[]:
               [3, 4, 5],
               [6, 7, 8]])
        Create a 3x3 identity matrix
In []: y = np.eye(3)
        У
        array([[ 1., 0., 0.],
               [ 0., 1., 0.],
               [ 0., 0., 1.]])
        Use NumPy to generate a random number between 0 and 1
In [ ]: z = np.random.rand()
        Z
        array([ 0.42829726])
        Use NumPy to generate an array of 25 random numbers sampled from a standard normal distribution
In []: n = np.random.randn(25)
        n
        array([ 1.32031013,  1.6798602 , -0.42985892, -1.53116655,  0.85753232,
                0.87339938, 0.35668636, -1.47491157, 0.15349697, 0.99530727,
               \hbox{-0.94865451, -1.69174783, 1.57525349, -0.70615234, 0.10991879,}
               -0.49478947, 1.08279872, 0.76488333, -2.3039931 , 0.35401124,
               -0.45454399, -0.64754649, -0.29391671, 0.02339861, 0.38272124])
        Create the following matrix:
In [ ]: ar = np.arange(0.01, 1.01, 0.01).reshape(10,10)
        array([[ 0.01, 0.02, 0.03, 0.04, 0.05, 0.06, 0.07, 0.08,
                                                                       0.09, 0.1],
                0.11, 0.12, 0.13, 0.14, 0.15,
                                                  0.16,
                                                         0.17, 0.18,
                                                                       0.19, 0.2],
                0.21, 0.22, 0.23,
                                    0.24, 0.25,
                                                  0.26,
                                                         0.27, 0.28,
                                                                       0.29,
                                                                             0.3],
                0.31, 0.32, 0.33,
                                    0.34,
                                           0.35,
                                                  0.36,
                                                         0.37,
                                                                0.38,
                                                                       0.39,
                                                                             0.4],
                0.41, 0.42, 0.43,
                                    0.44,
                                           0.45,
                                                  0.46,
                                                         0.47,
                                                                0.48,
                                                                       0.49, 0.5],
                                                                             0.6],
                0.51, 0.52,
                              0.53,
                                     0.54,
                                            0.55,
                                                  0.56,
                                                         0.57,
                                                                0.58,
                                                                       0.59,
                0.61, 0.62,
                              0.63,
                                     0.64,
                                            0.65,
                                                  0.66,
                                                         0.67,
                                                                0.68,
                                                                       0.69,
                                                                             0.7],
                                                                       0.79, 0.8],
                0.71, 0.72,
                              0.73,
                                     0.74,
                                            0.75,
                                                  0.76,
                                                         0.77, 0.78,
                                                                       0.89, 0.9],
               [ 0.81, 0.82, 0.83,
                                    0.84, 0.85, 0.86, 0.87, 0.88,
               [0.91, 0.92, 0.93, 0.94, 0.95, 0.96, 0.97, 0.98, 0.99, 1.]]
        Create an array of 20 linearly spaced points between 0 and 1:
In []: la = np.linspace(0, 1, 20)
        la
                       , 0.05263158, 0.10526316, 0.15789474, 0.21052632,
        array([ 0.
Out[]:
                0.26315789, 0.31578947,
                                        0.36842105,
                                                     0.42105263, 0.47368421,
                0.52631579, 0.57894737, 0.63157895, 0.68421053, 0.73684211,
                0.78947368, 0.84210526, 0.89473684, 0.94736842, 1.
        Numpy Indexing and Selection
        Now you will be given a few matrices, and be asked to replicate the resulting matrix outputs:
In []: mat = np.arange(1,26).reshape(5,5)
        array([[ 1, 2, 3, 4, 5],
Out[]:
               [6, 7, 8, 9, 10],
               [11, 12, 13, 14, 15],
               [16, 17, 18, 19, 20],
               [21, 22, 23, 24, 25]])
In [ ]: # WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
        # BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
        # BE ABLE TO SEE THE OUTPUT ANY MORE
In [ ]: mat[2:6,1:6]
        array([[12, 13, 14, 15],
Out[]:
               [17, 18, 19, 20],
               [22, 23, 24, 25]])
In [ ]: # WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
        # BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
        # BE ABLE TO SEE THE OUTPUT ANY MORE
In []: mat[3:4,4:6]
Out[]:
In [ ]: # WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
        # BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
        # BE ABLE TO SEE THE OUTPUT ANY MORE
In [ ]: mat[0:3,1:2]
        array([[ 2],
               [7],
               [12]])
In [ ]: # WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
        # BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
        # BE ABLE TO SEE THE OUTPUT ANY MORE
In [ ]: mat[4:6.0:6]
Out[]: array([21, 22, 23, 24, 25])
In [ ]: # WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
        # BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
        # BE ABLE TO SEE THE OUTPUT ANY MORE
In [ ]: mat[3:6,0:6]
        array([[16, 17, 18, 19, 20],
Out[]:
              [21, 22, 23, 24, 25]])
        Now do the following
        Get the sum of all the values in mat
In [ ]: sum = np.sum(mat)
        sum
Out[]:
        Get the standard deviation of the values in mat
In [ ]: sd = np.std(mat)
        sd
```
